

To whom It may concern

CHAMCO is a privately held process engineering company, with capabilities of international engineering services.

CHAMCO works exclusively in the US with Indian Tribes only.

CHAMCO started its primary business is in the field of turning Municipal Solid Waste (MSW) into Energy with some twenty years' experience in incineration and gasification of MSW.

A reference letter is posted in the frontpage of our website, "..... a letter" dated 2005.

In the last few years CHAMCO has become an Environmental Company pursuing projects in the fields, which we have unique knowhow:

- 1- By using sun energy to produce water with minim amount of renewable energy for drinking and agriculture.
- 2- By using seawater for irrigation
- 3- By using the Municipal Solid Wastes to produce compost and improve the top soil to develop new farmland and forests
- 4- By using the leftover of Municipal Solid Waste, which has energy to generate electricity
- 5- By using sewer to produce biogas and use leftovers for irrigation and agriculture.

We have partner with the biggest electrical and mechanical engineering company in China, CMEC (www.cmec.com) for such a size project.

We have partner with a leading sewer and wastewater processor company in China, PUXIN (www.puxintech.com)

We have partner with a leading solar energy company in China E-Able Power (www.e-ablepower.com)
